Higher potential returns generally involve greater risk, and short-term volatility is not uncommon when investing in various types of funds, including but not limited to sector funds, emerging market funds, and small- and mid-cap funds. Risks for emerging markets include, for instance, risks relating to the relatively smaller size and reduced liquidity of these markets, high inflation rates and adverse political developments. Risks for smaller companies include business risks, significant stock price fluctuations and reduced liquidity. Investing in higher-yielding, lower-rated bonds have a greater risk of price fluctuation and loss of principal and income than U.S. government securities, such as U.S. Treasury bonds and bills. Treasuries are guaranteed by the government for repayment of principal and interest if held to maturity. Investors should carefully assess the risks associated with an investment in the fund. Government securities are guaranteed as to the timely payment of principal and interest if held to maturity. Fund shares are not insured, are not backed by the U.S. government and their value and yield will vary with market conditions.

The Variable Annuity Life Insurance Company (VALIC) Fixed-Interest Option rate is applicable to the VALIC Fixed Annuity (Policy Form GFUA-398). VALIC declares a portfolio interest rate monthly for the Fixed-Interest Option. That declared portfolio interest rate is guaranteed until the end of the month and is credited to all new and old deposits as well as credited interest. The contractual lifetime minimum guaranteed interest rate is 3%. VALIC guarantees – for calendar year 2023 – a minimum interest rate of 3.00%. All interest is compounded daily at the declared annual effective rate. VALIC's interest-crediting policy is subject to change, but any changes will not reduce the current rate below the contractually guaranteed minimum on money already credited to the account.
